ECOSYSTEM

Information about the partners

MISSION

Get partners to secure the foundation for blockchain

VISION

Development of the most secure blockchain with the first two factor authentication method

SOCIAL CLUBS SPAIN

Uses NFTs as a membership card to gain entry into the social club

SOCIAL CLUBS GERMANY

Germany legalizes and opens social clubs in 2023 with the same principle as in Spain

COFFEE SHOPS NETHERLANDS

NFT Stamping system and crypto payment in the store

ART GALLERIES IN NETHERLANDS

Platform for artists and galleries to link artworks with NFTs

RESTAURANTS

NFT Stamping system and crypto payment in the store

SPORT CLUBS

Checking in at various gyms and sporting events

Quote:

Partners are needed to generate reach and money for the blockchain.

NFT MEMBERCARDS

Information about the NFT Membercards

HOW IT WORKS

An NFT membership card operates like a typical digital membership card, but is uniquely anchored in the blockchain, ensuring infallible and permanent data security. After purchase, the customer scans a QR code at the Social Club with their smartphone for access confirmation. Concurrently, if equipped, the club can receive customer information on its computer.

SOCIAL CLUB PARTNERSHIP

We are initially looking for five social club partners, each offering 5,000 NFTs with their own branding. Customers who purchase such an NFT gain access to all five partner clubs.

Subsequently, we aim to engage more Social Club partners to establish a monthly subscription model. For our customers, we have devised four distinct packages, each offering a varying number of check-ins per Social Club per month.

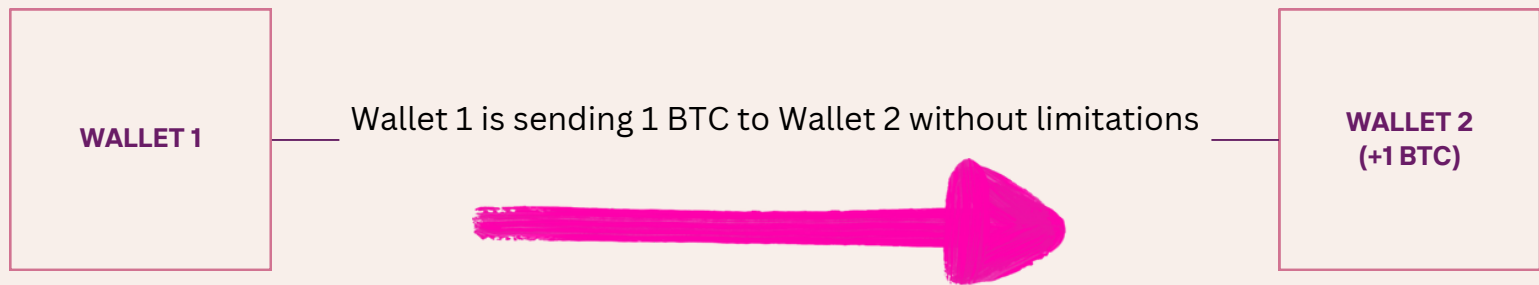

PROFIT SHARING

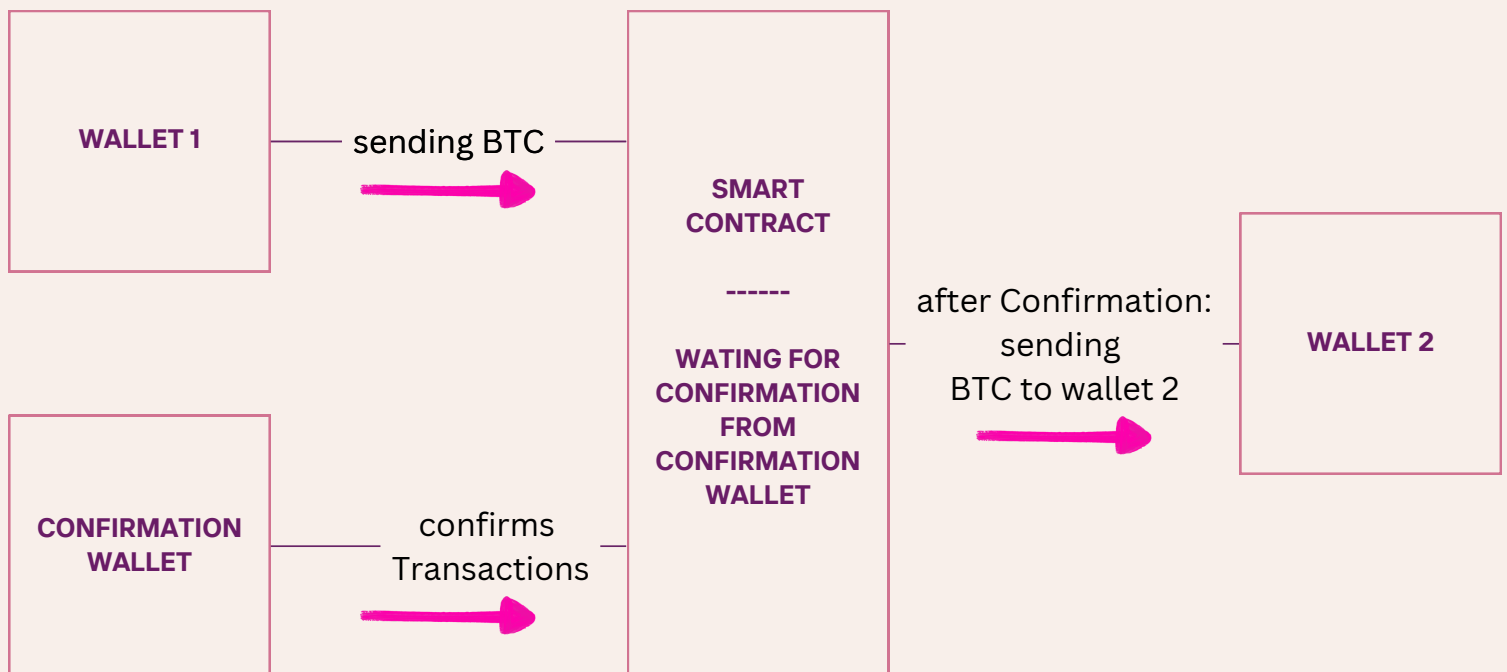

The social clubs receive between 85% and 95% of the sold NFTs. The Smart Contract specifies when an NFT is sold, the coins are divided directly.

In our monthly plan, we split the money fairly among all Social Clubs that take part. Developers get 10% of the total income, and the rest, 90%, is shared equally among all Social Clubs. This way, everyone gets a fair share.

Release of the CITY SIGN Blockchain and migrate Projects to it

Connecting the CITY SIGN Blockchain with the real world

THE GOAL

Our goal with the City Sign Blockchain is to connect WEB3 systems with the real world and allow for smooth interaction. With high security standards, we aim to be recognized as the official blockchain for city communication. The City Sign Blockchain is more than just technology; it's our vision for safe and connected communication in our cities.
